Globally COVID-19 cases have surpassed 1.28 million with more than 72,000 deaths.

Governor Newsom announces that the state has already secured up to 4,613 additional beds to fight COVID-19 and relieve pressure on the health care delivery system. California is also setting up eight federal medical stations across the state and has leased and reopened two recently shuttered hospitals to accommodate overflow patients.

The National Indian Health Board and the Association of American Indian Physicians are convening a Town Hall on Wednesday, April 8, 2020, at 5:00 PM ET, where a group of Native physicians will answer questions about health care during the COVID-19 pandemic.

The California Area Indian Health Service (IHS) has reported that 25 California IHS patients have tested positive for COVID-19 as of 4/7/2020.

The total number of cases in the U.S. increased from 330,891 as reported on Monday 4/6/2020 to 374,329 reported today. The number of deaths increased from 8,910 to 12,064.

**COVID-19: U.S. at a Glance**

- Total cases: 374,329
- Total deaths: 12,064
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Puerto Rico, Guam, the Northern Mariana Islands, and the U.S. Virgin Islands)

* Data include both confirmed and presumptive positive cases of COVID-19 reported to CDC or tested at CDC since January 21, 2020, with the exception of testing results for persons repatriated to the United States from Wuhan, China and Japan. State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

**Public Health Laboratory Testing**

As of the evening of April 6, the total number of public health laboratories (PHL) that have completed verification and are offering testing is 95. This includes one or more PHL in 50 states plus DC, Guam and Puerto Rico.
As of April 6, 2020, there are a total of 15,865 positive cases and 374 deaths in California.

Ages of all confirmed positive cases:
- Age 0-17: 197 cases
- Age 18-49: 7,753 cases
- Age 50-64: 4,344 cases
- Age 65 and older: 3,516 cases
- Unknown/Missing: 55 cases

Gender of all confirmed positive cases:
- Female: 7,600 cases
- Male: 7,957 cases
- Unknown: 308 cases

In order to better focus public health resources on the changing needs of California communities, beginning on March 18, the state is no longer collecting information about California travelers returning from countries that have confirmed COVID-19 outbreaks. Community transmission of COVID-19 has been identified in California since late February, and since early March, most of the confirmed cases in the state were not related to travel outside of the United States.

Twenty-two public health labs in California are testing samples for COVID-19. These labs include the California Department of Public Health’s Laboratory in Richmond, Alameda, Contra Costa, Humboldt, Long Beach, Los Angeles, Monterey, Napa-Solano-Yolo-Marin (located in Solano), Orange, Riverside, Sacramento, San Bernardino, San Diego, San Francisco, San Joaquin, San Luis Obispo, San Mateo, Santa Clara, Shasta, Sonoma, Tulare and Ventura County public health laboratories. The Richmond Laboratory will provide diagnostic testing within a 48-hour turnaround time. This means California public health officials will get test results sooner, so that patients will get the best care.
