

## DAILY HIGHLIGHTS

Globally, COVID-19 cases have surpassed 38.39 million with more than 1.08 million deaths.

The total number of cases in the U.S. increased from 7,835,007 as reported on Wednesday 10/15/2020 to 7,894,768 reported today. The number of deaths in the U.S. increased from 215,194 to 216,025.

The National Institutes of Health, working in collaboration with the Biomedical Advanced Research and Development Authority (BARDA), announced on October 6, 2020, a third round of contract awards for scale-up and manufacturing of new COVID-19 testing technologies. The six new Rapid Acceleration of Diagnostics (RADx) initiative contracts total \$98.35 million for point-of-care and other novel test approaches that provide new modes of sample collection, processing and return of results. Innovations in these new technologies include integration with smart devices, mobile-lab processing that can be deployed to COVID-19 hot spots, and test results available within minutes. To read the full article, click [HERE](#).

According to CNBC and other credible news sources, a 25-year-old man in the U.S. state of Nevada has contracted the coronavirus on two separate occasions, a study in the Lancet Infectious Diseases journal showed, with the patient becoming seriously ill following the second infection. It is the first confirmed case of a U.S. patient becoming re-infected with Covid-19, and the fifth known case reported worldwide. He has now since recovered. To read the full article, click [HERE](#).

The World Health Organization (WHO) released an article today talking about the impact of COVID-19 on people's livelihoods, their health, and our food systems. To read the full article, click [HERE](#).

Simultaneous outbreaks of flu and COVID-19 will drain the state's health care resources. Getting a flu shot protects you and your family. To find a flu shot near you, click [HERE](#).

## UNITED STATES

### COVID-19: U.S. at a Glance\*

- Total cases: 7,894,768
- Total deaths: 216,025
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

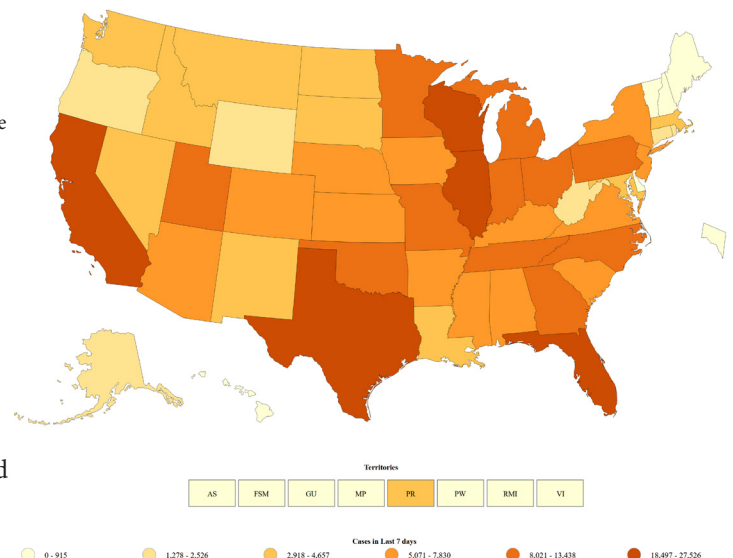

\*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020. The position statement included a case definition and made COVID-19 a nationally notifiable disease.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by:

- meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

### National Laboratory Testing Data

- Total tests reported: 129,901,989
- Positive tests reported: 9,711,527
- Percent of positive tests: 7%

# CORONAVIRUS DISEASE 2019 (COVID-19) SITUATIONAL REPORT #151 OCTOBER 15, 2020

\*as of 11:59PM EST October 13, 2020

## CALIFORNIA

As of October 14, 2020, there were a total of 858,401 positive cases and 16,757 deaths in California.

Ages of all confirmed positive cases:

- Age 0-17: 90,259 cases
- Age 18-49: 513,932 cases
- Age 50-64: 161,957 cases
- Age 65 and older: 91,359 cases
- Unknown/Missing: 894 cases

Gender of all confirmed positive cases:

- Female: 433,299 cases
- Male: 418,205 cases
- Unknown: 6,897 cases

Lab tests reported statewide: 16,517,812

Twenty-five public health labs in California are testing samples for COVID-19. These labs include the California Department of Public Health's Laboratory in Richmond, Alameda, Butte, Contra Costa, Fresno, Humboldt, Imperial, Long Beach, Los Angeles, Monterey, Napa-Solano-Yolo-Marin (located in Solano), Orange, Riverside, Sacramento, San Bernardino, San Diego, San Francisco, San Joaquin, San Luis Obispo, San Mateo, Santa Clara, Shasta, Sonoma, Tulare and Ventura County public health laboratories. The Richmond Laboratory will provide diagnostic testing within a 48-hour turnaround time. This means California public health officials will get test results sooner, so that patients will get the best care.
