Globally, COVID-19 cases have surpassed 50.26 million with more than 1.25 million deaths.

In the United States, the total number of cases stands at 9,913,553 and deaths at 237,037.

As many people in the United States begin to plan for fall and winter holiday celebrations, CDC offers the following considerations to help protect individuals and their families, friends, and communities from COVID-19. For this year's Thanksgiving guidance, please click HERE.

Join the Federal Emergency Management Agency (FEMA) Region II National Preparedness Division for a webinar on face mask guidance and specific considerations for people with disabilities. The Centers for Disease Control and Prevention (CDC) recommends wearing a face mask as an important way to slow the spread of COVID-19. There are many masks to choose from and Duke University has recently developed a low-cost technique for the measurement of face mask efficacy for filtering droplets emitted during speech. This webinar will describe the set-up of this technique, preliminary results from a range of commonly available face mask types, and the potential of this technology as a demonstration and testing method for the community. This webinar will also discuss when to wear a face mask, reasons why a person with a disability might not be able to wear a face mask, and the legal rights a person has under the Americans with Disabilities Act (ADA). The webinar is not intended to be legal advice but rather general guidance. The webinar will take place Tuesday, November 10, 2020 from 2:30-4:00 PM EST. Register for the webinar HERE.

COVID-19: U.S. at a Glance*
- Total cases: 9,913,553
- Total deaths: 237,037
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by:
- i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data
- Total tests reported: 156,318,520
- Positive tests reported: 11,572,268
- Percent of positive tests: 7%
CALIFORNIA

As of November 8, 2020, there were a total of 971,851 positive cases and 17,977 deaths in California.

Ages of all confirmed positive cases:
- Age 0-17: 105,005 cases
- Age 18-49: 580,281 cases
- Age 50-64: 183,085 cases
- Age 65 and older: 102,592 cases
- Unknown/Missing: 888 cases

Gender of all confirmed positive cases:
- Female: 491,542 cases
- Male: 472,695 cases
- Unknown: 7,614 cases

Lab tests reported statewide: 19,918,479

Twenty-five public health labs in California are testing samples for COVID-19. These labs include the California Department of Public Health's Laboratory in Richmond, Alameda, Butte, Contra Costa, Fresno, Humboldt, Imperial, Long Beach, Los Angeles, Monterey, Napa-Solano-Yolo-Marin (located in Solano), Orange, Riverside, Sacramento, San Bernardino, San Diego, San Francisco, San Joaquin, San Luis Obispo, San Mateo, Santa Clara, Shasta, Sonoma, Tulare and Ventura County public health laboratories. The Richmond Laboratory will provide diagnostic testing within a 48-hour turnaround time. This means California public health officials will get test results sooner, so that patients will get the best care.

New Confirmed Cases in California by Date

New Confirmed Deaths in California by Date

As of 11/9/2020. Source: CDPH
American Indians and Alaska Natives account for 0.5% percent of the population, 0.3% of COVID-19 cases, and 0.3% of deaths in California. This includes a total of 1,989 cases and 59 deaths among American Indian and Alaska Native people in California.

Latinos and African Americans are dying at disproportionately high rates in California. The proportion of COVID-19 deaths in Latinos is 1.3 times their population representation across all adult age categories.

Note: 29% of cases and 1% of deaths are of unknown race/ethnicity. As of 11/9/2020. Source: CDPH
Two sources for tracking American Indian and Alaska Native (AIAN) cases reported in California

Data from the Indian Health Service (IHS) include positive cases reported by Tribal and Urban Indian Health Programs.

Data from California Department of Public Health (CDPH) include all positive cases of AIAN diagnosed in California.

Updated 10/21/2020
TRIBAL CASINOS
There are 66 tribal casinos in California. As of October 13, 2020, all of these casinos are open and operating.

TRIBAL HEAD START
Beginning in early September 2020, some Tribal early childhood education programs, such as Head Start, will begin reopening either in person, virtually, or in combination of both (i.e. hybrid program). Please check with local school districts, Tribes, or Lead Agencies for start dates.

Note: CRIHB’s COVID response team will continue to monitor these tribal programs and facilities as the situation progresses.
