Globally, COVID-19 cases have surpassed 51.84 million with more than 1.28 million deaths.

In the United States, the total number of cases stands at 10,314,254 and deaths at 241,069.

As many people in the United States begin to plan for fall and winter holiday celebrations, CDC offers the following considerations to help protect individuals and their families, friends, and communities from COVID-19. For this year’s Thanksgiving guidance, please click HERE.

Commercial tobacco product use is the leading cause of disease, disability, and death in the United States. Declines in use have occurred over time, but prevalence remains particularly high among American Indians and Alaska Natives. The risks of tobacco product use have been compounded by the COVID-19 pandemic, with emerging data showing that current and former cigarette smokers are at increased risk of more severe illness from COVID-19. The Indian Health Service (IHS) is hosting a webinar where participants will gain an understanding of the state of the science with regard to COVID-19 outcomes and commercial tobacco product use, including cigarette smoking and e-cigarette use. The webinar will take place on Wednesday, November 18, 2020 at 3:00 PM EST. Register for the webinar HERE.

The Indian Health Service (IHS) is hosting a webinar that will focus on developing providers’ skills in supporting parents/families in ensuring the safety of their child with a neurodevelopmental disorder, including Intellectual Disability, Autism Spectrum Disorder, and other neurodevelopmental disorders. Providers will be able to teach families strategies for managing COVID-19 specific safety restrictions. The webinar will take place on Tuesday, November 17, 2020 at 3:00 PM EST. Register for the webinar HERE.

UNITED STATES

COVID-19: U.S. at a Glance*
- Total cases: 10,314,254
- Total deaths: 241,069
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by:
1) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data
- Total tests reported: 160,684,177
- Positive tests reported: 12,008,474
- Percent of positive tests: 7%
As of November 11, 2020, there were a total of 991,609 positive cases and 18,108 deaths in California.

Ages of all confirmed positive cases:
- Age 0-17: 107,582 cases
- Age 18-49: 592,114 cases
- Age 50-64: 186,603 cases
- Age 65 and older: 104,403 cases
- Unknown/Missing: 907 cases

Gender of all confirmed positive cases:
- Female: 501,490 cases
- Male: 482,394 cases
- Unknown: 7,725 cases

Lab tests reported statewide: 20,342,072

Twenty-five public health labs in California are testing samples for COVID-19. These labs include the California Department of Public Health's Laboratory in Richmond, Alameda, Butte, Contra Costa, Fresno, Humboldt, Imperial, Long Beach, Los Angeles, Monterey, Napa-Solano-Yolo-Marin (located in Solano), Orange, Riverside, Sacramento, San Bernardino, San Diego, San Francisco, San Joaquin, San Luis Obispo, San Mateo, Santa Clara, Shasta, Sonoma, Tulare and Ventura County public health laboratories. The Richmond Laboratory will provide diagnostic testing within a 48-hour turnaround time. This means California public health officials will get test results sooner, so that patients will get the best care.

## INDIAN HEALTH SERVICE CALIFORNIA AREA

26,826 Tribal or Urban Indian Health Program patients in the California Area have been tested for COVID-19 as of 11/10/2020.

Of these, 1,700 patients have tested positive for COVID-19 and 24,217 have tested negative for COVID-19.
CONFIRMED CASES AND DEATHS BY COUNTY

Counties with most reported cases
- Los Angeles: 324,567
- Riverside: 72,953
- San Bernardino: 70,374
- Orange: 62,929
- San Diego: 61,746

Counties with most reported deaths
- Los Angeles: 7,216
- Orange: 1,514
- Riverside: 1,352
- San Bernardino: 1,096
- San Diego: 915

Tribes do not need to issue a state of emergency to access FEMA resources.

Updated 10/21/2020
TRIBAL CASINOS
There are 66 tribal casinos in California. As of October 13, 2020, all of these casinos are open and operating.

TRIBAL HEAD START
Beginning in early September 2020, some Tribal early childhood education programs, such as Head Start, will begin reopening either in person, virtually, or in combination of both (i.e. hybrid program). Please check with local school districts, Tribes, or Lead Agencies for start dates.

Note: CRIHB’s COVID response team will continue to monitor these tribal programs and facilities as the situation progresses.

If you have any questions or concerns please contact:
Vanesscia Cresci at vcresci@crihb.org or Aurimar Ayala at aayala@crihb.org
