DAILY HIGHLIGHTS

Globally, COVID-19 cases have surpassed 54.77 million with more than 1.32 million deaths.

In the United States, the total number of cases stands at 11,136,253 and deaths at 246,232.

California has released guidance for people traveling into and out of the state. Learn more HERE.

As many people in the United States begin to plan for fall and winter holiday celebrations, CDC offers the following considerations to help protect individuals and their families, friends, and communities from COVID-19. For this year’s Thanksgiving guidance, please click HERE.

Commercial tobacco product use is the leading cause of disease, disability, and death in the United States. Declines in use have occurred over time, but prevalence remains particularly high among American Indians and Alaska Natives. The risks of tobacco product use have been compounded by the COVID-19 pandemic, with emerging data showing that current and former cigarette smokers are at increased risk of more severe illness from COVID-19. The Indian Health Service (IHS) is hosting a webinar where participants will gain an understanding of the state of the science with regard to COVID-19 outcomes and commercial tobacco product use, including cigarette smoking and e-cigarette use. The webinar will take place on Wednesday, November 18, 2020 at 3:00 PM EST. Register for the webinar HERE.

UNITED STATES

COVID-19: U.S. at a Glance*
- Total cases: 11,136,253
- Total deaths: 246,232
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by:
- i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data
- Total tests reported: 168,177,489
- Positive tests reported: 12,763,203
- Percent of positive tests: 8%
CALIFORNIA

As of November 16, 2020, there were more than 1.03 million positive cases and a total of 18,299 deaths in California.

Ages of all confirmed positive cases:
• Age 0-17: 113,638 cases
• Age 18-49: 619,702 cases
• Age 50-64: 194,932 cases
• Age 65 and older: 108,766 cases
• Unknown/Missing: 940 cases

Gender of all confirmed positive cases:
• Female: 525,328 cases
• Male: 504,618 cases
• Unknown: 8,032 cases

Lab tests reported statewide: 21,259,076

Twenty-five public health labs in California are testing samples for COVID-19. These labs include the California Department of Public Health's Laboratory in Richmond, Alameda, Butte, Contra Costa, Fresno, Humboldt, Imperial, Long Beach, Los Angeles, Monterey, Napa-Solano-Yolo-Marin (located in Solano), Orange, Riverside, Sacramento, San Bernardino, San Diego, San Francisco, San Joaquin, San Luis Obispo, San Mateo, Santa Clara, Shasta, Sonoma, Tulare and Ventura County public health laboratories. The Richmond Laboratory will provide diagnostic testing within a 48-hour turnaround time. This means California public health officials will get test results sooner, so that patients will get the best care.

As of 11/17/2020. Source: CDPH
American Indians and Alaska Natives account for 0.5% of the population, 0.3% of COVID-19 cases, and 0.3% of deaths in California. This includes a total of 2,170 cases and 61 deaths among American Indian and Alaska Native people in California.

Latinos and African Americans are dying at disproportionately high rates in California. The proportion of COVID-19 deaths in Latinos is 1.3 times their population representation across all adult age categories.

Note: 28% of cases and 1% of deaths are of unknown race/ethnicity. As of 11/17/2020. Source: CDPH
Two sources for tracking American Indian and Alaska Native (AIAN) cases reported in California

Data from the Indian Health Service (IHS) include positive cases reported by Tribal and Urban Indian Health Programs.

Data from California Department of Public Health (CDPH) include all positive cases of AIAN diagnosed in California.

Tribes do not need to issue a state of emergency to access FEMA resources.
TRIBAL CASINOS
There are 66 tribal casinos in California. As of October 13, 2020, all of these casinos are open and operating.

TRIBAL HEAD START
Beginning in early September 2020, some Tribal early childhood education programs, such as Head Start, will begin reopening either in person, virtually, or in combination of both (i.e. hybrid program). Please check with local school districts, Tribes, or Lead Agencies for start dates.

Note: CRIHB’s COVID response team will continue to monitor these tribal programs and facilities as the situation progresses.

If you have any questions or concerns please contact:
