#CovidVaccineSavesLives

“Looking forward to securing our future while safeguarding our past.”

- Silver and Awl-aw-shaw Galleto, Cloverdale Rancheria of Pomo Indians

“Utilizing modern day science to combat this horrid virus is the only logical way for me to protect and preserve my mother, my children, and our greater Tribal community. Looking forward to securing our future while safeguarding our past.”

Both vaccines have mild and temporary side effects, including pain at the injection site, headache, fever, fatigue, chills, and muscle and joint pain. Individuals with severe allergic reactions to other vaccines should consult their doctor in case they may be allergic to a component of the vaccine. They should be observed for 30 minutes following injection rather than the usual 15 minutes. It is recommended that individuals who carry an EpiPen for their allergies should bring it to their appointment. CDC notes that women who are pregnant or breastfeeding can be presented the option to vaccinate, but first talk to your health care practitioner if you have any concerns about whether you should receive it.
