

DAILY HIGHLIGHTS

Globally, COVID-19 cases have surpassed 129.2 million with more than 2.8 million deaths.

In the United States, the total number of cases stands at 30,357,579 and deaths at 550,169.

A new CDC study provides strong evidence that mRNA COVID-19 vaccines are highly effective in preventing SARS-CoV-2 infections in real-world conditions among health care personnel, first responders, and other essential workers. Results showed that following the second dose of vaccine (the recommended number of doses), risk of infection was reduced by 90 percent two or more weeks after vaccination. Following a single dose of either vaccine, the participants' risk of infection with SARS-CoV-2 was reduced by 80 percent two or more weeks after vaccination. Read the full CDC press release [HERE](#).

The state is expanding who is eligible to get the vaccine based on expected supply increases. Californians 50+ will be eligible for vaccination starting April 1. Every Californian 16 and up will be eligible for vaccination on April 15, 2021. Learn how to get vaccinated [HERE](#).

The COVID-19 pandemic caused approximately 375,000 deaths in the United States during 2020. The age-adjusted death rate in the U.S. increased by 15.9% in 2020. Death rates were highest among non-Hispanic Black and non-Hispanic American Indian and Alaska Native people. COVID-19 was the third leading cause of death. UNITED STATES

COVID-19: U.S. at a Glance*

- Total cases: 30,357,579
- Total deaths: 550,169
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

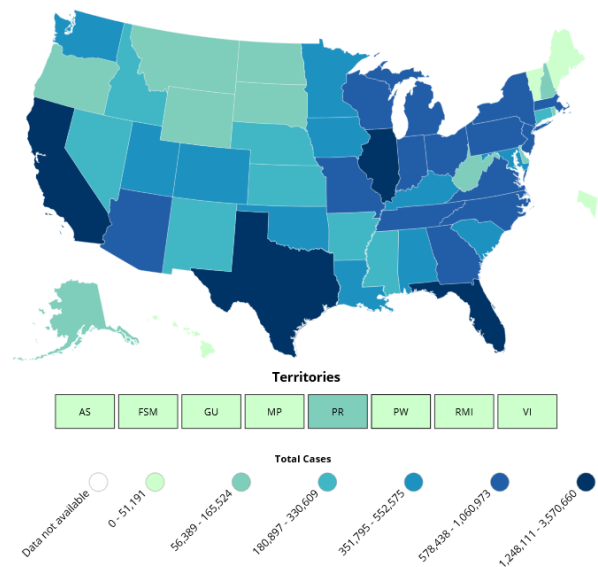

A probable case or death is defined by:

- meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or
 - meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or
 - meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.
- State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.
