Globally, COVID-19 cases have surpassed 129.2 million with more than 2.8 million deaths.

In the United States, the total number of cases stands at 30,357,579 and deaths at 550,169.

A new CDC study provides strong evidence that mRNA COVID-19 vaccines are highly effective in preventing SARS-CoV-2 infections in real-world conditions among health care personnel, first responders, and other essential workers. Results showed that following the second dose of vaccine (the recommended number of doses), risk of infection was reduced by 90 percent two or more weeks after vaccination. Following a single dose of either vaccine, the participants’ risk of infection with SARS-CoV-2 was reduced by 80 percent two or more weeks after vaccination. Read the full CDC press release HERE.

The state is expanding who is eligible to get the vaccine based on expected supply increases. Californians 50+ will be eligible for vaccination starting April 1. Every Californian 16 and up will be eligible for vaccination on April 15, 2021. Learn how to get vaccinated HERE.

The COVID-19 pandemic caused approximately 375,000 deaths in the United States during 2020. The age-adjusted death rate in the U.S. increased by 15.9% in 2020. Death rates were highest among non-Hispanic Black and non-Hispanic American Indian and Alaska Native people. COVID-19 was the third leading cause of death. View the full CDC MMWR for March 31 HERE.

CRIHB has new and updated COVID-19 vaccine information, including a new flyer on the single-dose Janssen vaccine. Access all of CRIHB’s COVID-19 vaccine resources HERE.

COVID-19: U.S. at a Glance*
- Total cases: 30,357,579
- Total deaths: 550,169
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by:
- i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data
- Total tests reported: 377,222,061
- Positive tests reported: 32,383,830
- Percent of positive tests: 8.6%
**INDIAN HEALTH SERVICE CALIFORNIA AREA**

75,591 Tribal or Urban Indian Health Program patients in the California Area have been tested for COVID-19 as of 3/31/2021.

Of these, 7,766 patients have tested positive for COVID-19 and 64,688 have tested negative for COVID-19.

### CALIFORNIA

As of April 2, 2021, there were a total of 3,573,074 positive cases and 58,269 deaths in California.

**Ages of all confirmed positive cases:**
- Age 0-17: 464,500
- Age 18-49: 2,036,652
- Age 50-64: 678,884
- Age 65 and older: 393,038

**Gender of all confirmed positive cases:**
- Female: 1,822,268
- Male: 1,715,076
- Unknown: 35,731

Lab tests reported statewide*: 54,553,918

*as of 4/1/21

Numerous public health labs in California are testing for COVID-19 samples. Click [HERE](#) to find your nearest testing site.
