

CORONAVIRUS DISEASE 2019 (COVID-19) SITUATIONAL REPORT #302 JUNE 9, 2021

DAILY HIGHLIGHTS

Globally, COVID-19 cases have surpassed 173.6 million with more than 3.7 million deaths.

In the United States as of June 8, the total number of cases stands at 33,207,488 and deaths at 595,301.

COVID-19 vaccination began in the United States in December 2020, and adults aged ≥ 65 years were prioritized in early phases. By May 1, 2021, 82%, 63%, and 42% of adults aged ≥ 65 , 50–64, and 18–49 years, respectively, had received ≥ 1 vaccine dose. From November 29–December 12, 2020 to April 18–May 1, 2021, the rate ratios of COVID-19 incidence, emergency department visits, hospital admissions, and deaths among adults aged ≥ 65 years (≥ 70 years for hospitalizations) to adults aged 18–49 years declined 40%, 59%, 65%, and 66%, respectively. The greater decline in COVID-19 morbidity and mortality in older adults, the age group with the highest vaccination rates, demonstrates the potential impact of increasing population-level vaccination coverage. View the full CDC June 8 MMWR [HERE](#).

COVID-19 adolescent hospitalization rates from COVID-NET peaked at 2.1 per 100,000 in early January 2021, declined to 0.6 in mid-March, and rose to 1.3 in April. Among hospitalized adolescents, nearly one third required intensive care unit admission, and 5% required invasive mechanical ventilation; no associated deaths occurred. Recent increased hospitalization rates in spring 2021 and potential for severe disease reinforce the importance of continued COVID-19 prevention measures, including vaccination and correct and consistent mask wearing among persons not fully vaccinated or when required. COVID-19: U.S. at a Glance* (as of 6/8/21)

- Total deaths: 595,301
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

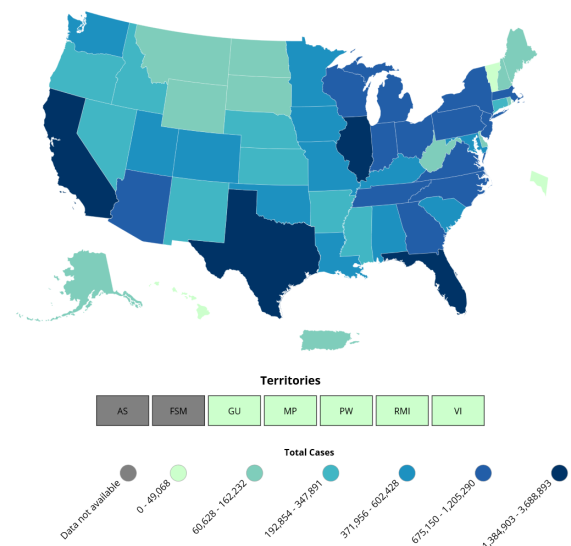

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by:

- i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.
- State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.
