Globally, COVID-19 cases have surpassed 181.5 million with more than 3.9 million deaths.

In the United States as of June 29, the total number of cases stands at 33,470,212 and deaths at 601,808.

Multiple variants of the virus that causes COVID-19 have been identified in the state of California during the COVID-19 pandemic. Variants are determined by their genetic sequences. CDPH collects data on variant sequences from a variety of different sources to assemble a picture of the different strains currently circulating in California. CDPH is working with federal, local and academic partners to better understand how variants might impact Californians, including if they have any differences in their response to vaccination. The immune response resulting from either COVID-19 infection or vaccine targets several parts of the SARS-CoV-2 spike protein. Even if a virus has one or more mutations in the spike protein, vaccines and natural infection would still be expected to provide valuable protection. As of June 23, 2021, 61,923 samples have been sequenced in California. As of June 21, 2021, the alpha variant makes up 37.7% of specimens sequenced that are variants of concern or variants of interest. The gamma variant makes up 21.6% and the delta variant makes up 14.5%. You can view CDPH track these variants HERE.

Now you can show digital proof of your vaccination. If you were vaccinated in California, go to Digital COVID-19 Vaccine Record and enter your info to access it. Get your record HERE.

Vaccinations open to all Californians aged 12 and up. Book your shots HERE.
As of June 17, 2021, the table to the right shows that AIAN still have higher rates of COVID-19 infection, hospitalization, and death from COVID-19 than any other race/ethnicity group.

**COVID-19 CASES BY IHS AREA**

As of June 30, 2021, there were a total of 3,710,454 positive cases and 63,023 deaths in California.

Ages of all confirmed positive cases:
- Age 0-17: 482,359
- Age 18-49: 2,114,959
- Age 50-64: 704,986
- Age 65 and older: 408,150

Gender of all confirmed positive cases:
- Female: 1,892,331
- Male: 1,781,018
- Unknown: 37,105

Lab tests reported statewide*: 69,605,731

Numerous public health labs in California are testing for COVID-19 samples. Click HERE to find your nearest testing site.

**INDIAN HEALTH SERVICE CALIFORNIA AREA**

88,968 Tribal or Urban Indian Health Program patients in the California Area have been tested for COVID-19 as of 6/26/2021.

Of these, 8,359 patients have tested positive for COVID-19 and 77,321 have tested negative for COVID-19.

*as of 6/29/21

*as of 11:59PM EST June 26, 2021

*as of 6/29/21
American Indians and Alaska Natives account for 0.5% percent of the population, 0.3% of COVID-19 cases, and 0.3% of deaths in California. This includes a total of 10,229 cases and 227 deaths among American Indian and Alaska Native people in California.

Note: 21% of cases and 1% of deaths are of unknown race/ethnicity. As of 6/25/2021. Source: CDPH
Two sources for tracking American Indian and Alaska Native (AIAN) cases reported in California

Data from the Indian Health Service (IHS) include positive cases reported by Tribal and Urban Indian Health Programs.

Data from California Department of Public Health (CDPH) include all positive cases of AIAN diagnosed in California.
