

DAILY HIGHLIGHTS

Globally, COVID-19 cases have surpassed 208.4 million with more than 4.3 million deaths.

In the United States as of August 15, the total number of cases stands at 36,951,181 and deaths at 620,493.

The National Indian Health Board (NIHB) created a response plan template as a resource for Tribes, Pueblos, and Nations to use in developing COVID-19 or other outbreak response plans or in cross-walking with existing plans. Read more **HERE**.

Governor Newsom announced new requirements for K-12 teachers and school staff to be vaccinated against COVID-19 or tested regularly. The move is meant to protect students and school employees returning to in-person instruction. Find out more **HERE**.

The U.S. Food and Drug Administration amended the emergency use authorizations (EUAs) for both the Pfizer-BioNTech COVID-19 Vaccine and the Moderna COVID-19 Vaccine to allow for the use of an additional dose in certain immunocompromised individuals, specifically, solid organ transplant recipients or those who are diagnosed with conditions that are considered to have an equivalent level of immunocompromise. Today's action does not apply to people who are not immunocompromised. Read the full FDA press release **HERE**.

UNITED STATES

COVID-19: U.S. at a Glance*

- Total cases: 36,951,181
- Total deaths: 620,493
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

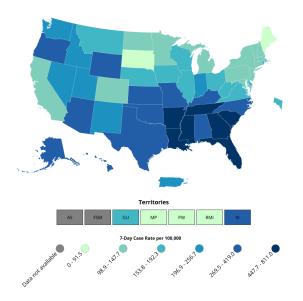

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by:

i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID19. State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.
