

HIGHLIGHTS

Globally, COVID-19 cases have surpassed 236.5 million with more than 4.8 million deaths.

In the United States as of October 7, the total number of cases stands at 43,997,504 and deaths at 707,065.

California will require COVID-19 student vaccinations. Students will be required to be vaccinated for in-person learning starting the term following the Food and Drug Administration's (FDA) full approval of the vaccine for their grade span (7-12 and K-6). Learn more [HERE](#).

Pfizer booster shots are now available to those 65 and older, long-term care residents, people with underlying health conditions, and people at risk because of their job. See if you're eligible and schedule your shot at My Turn [HERE](#).

Nationally, new daily COVID-19 case, hospitalization and death rates are all declining. As of Oct. 1, the nation's current seven-day case average is 106,395 new daily COVID-19 cases, a 13.3 percent decrease from the previous week's average, according to CDC data. This marks the second consecutive week the CDC recorded declining cases. New daily COVID-19 hospitalization rates have dropped 20 percent over the last two weeks. As of Oct. 2, the weekly COVID-19 death average was 1,476 deaths, down 3.3 percent from the week prior, according to the CDC. California continues to boast the lowest coronavirus case rate in the U.S., with the latest data from the CDC showing that the state's transmission level has decreased yet again. As of Oct. 1, the nation's most-populous state is now the only one that falls under the "moderate" transmission category, which is the second-lowest level, behind only the "low" tier.

UNITED STATES

COVID-19: U.S. at a Glance* (as of 10/7/21)

- Total cases: 43,997,504
- Total deaths: 707,065
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

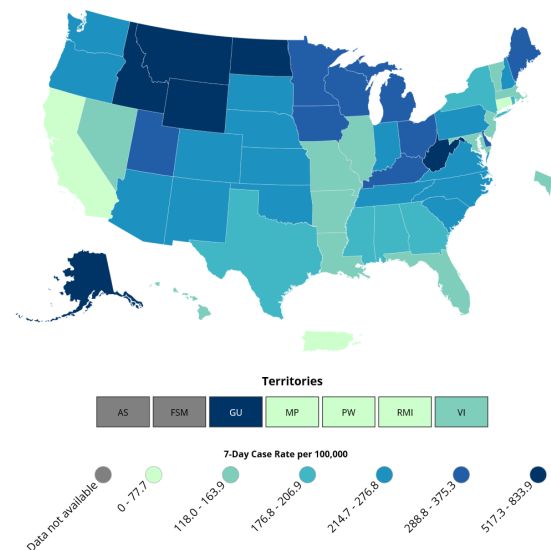

A probable case or death is defined by:

- meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or
 - meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or
 - meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.
- State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data

- Total tests reported: 586,818,195
- Positive tests reported: 45,460,645
- Percent of positive tests (7-day): 6.1%

COVID-19 CASES BY VARIANTS OF INTEREST, CALIFORNIA

As of October 6, 191,847 samples have been sequenced in California. In August 2021, 10% of cases in California have been sequenced so far. In July 2021, 21% of cases in California were sequenced. The table below shows the percent of specimens sequenced that are variants of concern or variants of interest statewide.

Specimen Collection Month	Alpha	Beta	Gamma	Delta	Epsilon	Zeta	Eta	Iota	Kappa	Mu
21-Sept	0.2%	0.0%	0.2%	99.2%	0.1%	0.0%	0.0%	0.0%	0.0%	0.1%

The following table shows the number of COVID-19 cases by variants of interest among the California counties with the most COVID-19 cases reported.

County	Number of Cases by Variants of Interest			Total COVID-19 Cases
	Alpha	Delta	Delta among AIAN	
Los Angeles	N/A*	N/A*	N/A*	1,467,450
San Diego	N/A*	4,827	23	359,883
Riverside	169	587	N/A*	356,906
San Bernardino	N/A*	N/A*	N/A*	347,594
Orange	562	3,545	N/A*	299,594
