

# CORONAVIRUS DISEASE 2019 (COVID-19) SITUATIONAL REPORT #387 JANUARY 10, 2022

## HIGHLIGHTS

Globally, COVID-19 cases have surpassed 305.9 million with more than 5.4 million deaths.

In the United States, the total number of cases stands at 59,521,277 and deaths at 834,077.

Pfizer boosters are now approved for age 12 and up. If your child was vaccinated for COVID-19 5 months ago or more, schedule their booster shot now on [My Turn](#).

In 19 California counties, less than a third of vaccinated residents are boosted. In some counties, it's less than 25%. Only 38% of vaccinated Californians have gotten a booster shot. Counties in the far north and rural areas continue to see lower numbers, with as few as 23% of vaccinated people getting a booster in Mariposa, Colusa and Merced counties. Nearly 64% of older adults have been boosted. But for younger Californians, getting an additional dose is far less common. Only 47% of those aged 50-64 have been boosted. Forty-four counties have boosted less than half their population in this age group.

California would spend \$2.7 billion on new efforts to respond to the surge in COVID-19 cases, including additional testing capacity and assistance to hospitals, under a budget proposal Gov. Gavin Newsom will send to state lawmakers next week. Newsom will also ask legislators to help craft new COVID sick pay rules for Californians, modeled after the policy that expired last fall, requiring businesses with 26 or more workers to offer up to two weeks of supplemental paid sick leave for employees to care for themselves or a family member. ## UNITED STATES

### COVID-19: U.S. at a Glance\*

- Total cases: 59,521,277
- Total deaths: 834,077
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

\*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

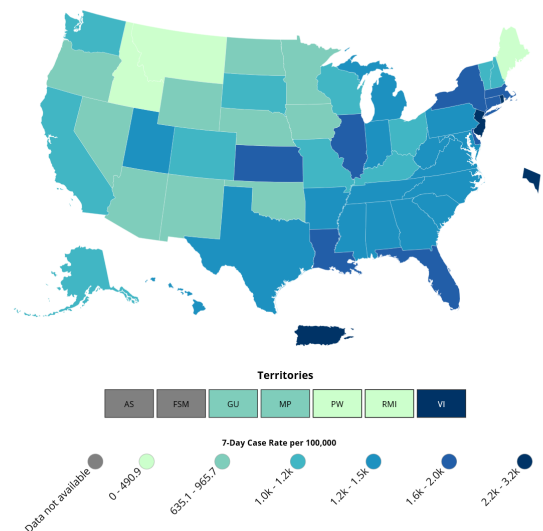

A probable case or death is defined by:

- i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.
- State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

### National Laboratory Testing Data

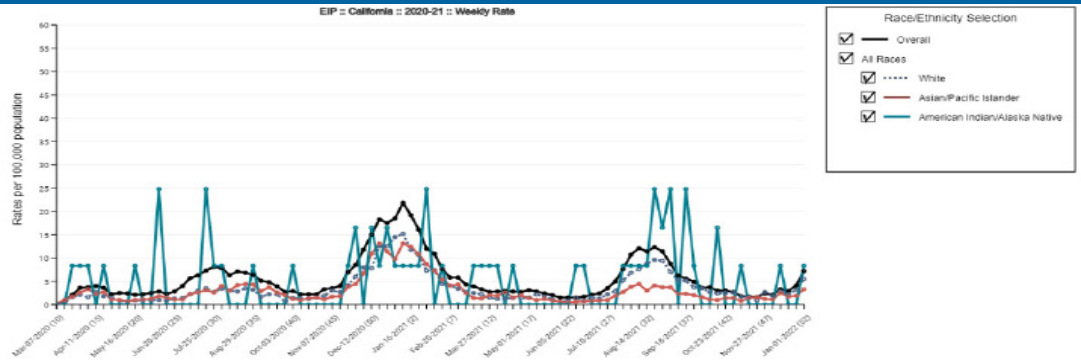

- Total tests reported: 732,891,931
- Positive tests reported: 60,498,162
- Percent of positive tests (7-day): 28.9%
