

HIGHLIGHTS

Globally, COVID-19 cases have surpassed 308.4 million with more than 5.4 million deaths.

In the United States, as of January 11, the total number of cases stands at 61,732,283 and deaths at 837,274.

The White House has released a new press briefing from their COVID-19 response team and public health officials. The following are key takeaways from the briefing: to help schools implement these proven COVID-19 prevention measures, the Biden administration provided schools \$130 billion in American Rescue Plan funding, with an additional \$10 billion to support COVID testing in schools. These historic investments have helped schools open safely. In fact, today, more than 96 percent of K-through-12 schools are open for in-person learning. Due to the rise in the demand for testing, the White plans to send 5 million free rapid tests to schools each month and provide another 5 million lab-based tests each month. The current seven-day daily average of cases is about 751,000 cases per day, an increase of about 47 percent over the previous week. The seven-day average of hospital admissions is about 19,800 per day, an increase of about 33 percent over the prior week. And the seven-day average of daily deaths are about 1,600 per day, which is an increase of about 40 percent over the previous week. View the full briefing [HERE](#).

California would spend \$2.7 billion on new efforts to respond to the surge in COVID-19 cases, including additional testing capacity and assistance to hospitals, under a budget proposal Gov. Gavin Newsom will send to state lawmakers next week. Newsom will also ask legislators to help craft new COVID sick pay rules for Californians, modeled after the policy that expired last fall, requiring businesses with 26 or more workers to offer up to two weeks of supplemental paid sick leave for employees to care for themselves or a family member. UNITED STATES

COVID-19: U.S. at a Glance* (as of 1/11/22)

- Total cases: 61,732,283
- Total deaths: 837,274
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

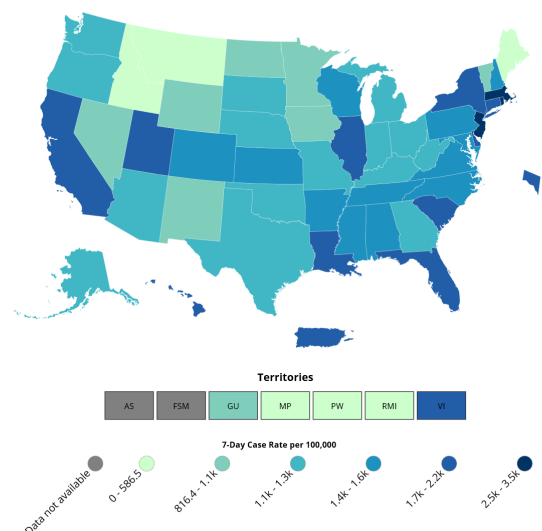

A probable case or death is defined by:

- meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or
 - meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or
 - meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.
- State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data

- Total tests reported: 737,405,541
- Positive tests reported: 61,812,380
- Percent of positive tests (7-day): 29.6%

COVID-19 VARIANTS OF CONCERN, CALIFORNIA

As of January 5, 349,078 samples have been sequenced in California. In December 2021, 5% of cases in California have been sequenced so far. In November 2021, 24% and October 2021, 20% of cases in California were sequenced. The table below shows the percent of specimens sequenced that are variants of concern or variants of interest statewide.

Specimen Collection Month	Alpha	Beta	Gamma	Delta	Epsilon	Zeta	Eta	Iota	Kappa	Mu	Omicron
21-Dec	0.0%	0.0%	0.0%	84.1%	0.0%	0.0%	0.0%	0.0%	0.0%	0.0%	15.7%

INDIAN HEALTH SERVICE CALIFORNIA AREA

143,801 Tribal or Urban Indian Health Program patients in the California Area have been tested for COVID-19 as of 1/9/2022.

Of these, 14,167 patients have tested positive for COVID-19 and 123,572 have tested negative for COVID-19. The 7-day rolling average positivity rate is 25.2%.
