

CORONAVIRUS DISEASE 2019 (COVID-19) SITUATIONAL REPORT #389 JANUARY 14, 2022

HIGHLIGHTS

Globally, as of January 13, COVID-19 cases have surpassed 318.6 million with more than 5.5 million deaths.

In the United States, as of January 13, the total number of cases stands at 62,973,416 and deaths at 839,043.

Testing is an important tool to help mitigate the spread of COVID-19. Public health experts and the Centers for Disease Control and Prevention recommend that Americans use at-home tests if they begin to have symptoms, at least five days after coming in close contact with someone who has COVID-19, or are gathering indoors with a group of people who are at risk of severe disease or unvaccinated. To help ensure Americans have tests on hand if a need arises, the Biden Administration is purchasing one billion at-home, rapid COVID-19 tests to give to Americans for free. A half-billion tests will be available for order on January 19th and will be mailed directly to American households. There will be free tests available for every household, and to promote broad access, the initial program will allow four free tests to be requested per residential address. Starting January 19th, Americans will be able to order their tests online at COVIDTests.gov, and tests will typically ship within 7-12 days of ordering. To ensure equity and access for all Americans, the Administration will also launch a call line to help those unable to access the website to place orders, and work with national and local community-based organizations to support the nation's hardest-hit and highest-risk communities in requesting tests.

In addition to this new program, there are many other options for Americans to get tested. There are now over 20,000 free testing sites across the nation, including four times as many pharmacies participating in the federal pharmacy free testing program as there were in January 2021, as well as federal surge free testing sites, with more free testing sites opening each week. UNITED STATES

COVID-19: U.S. at a Glance* (as of 1/13/22)

- Total cases: 63,397,935
- Total deaths: 842,873
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

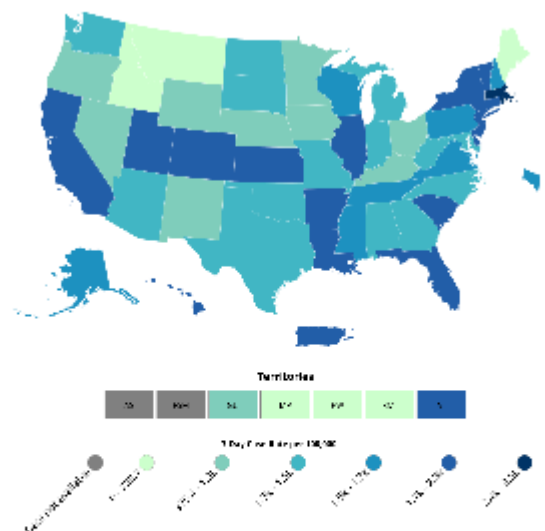

A probable case or death is defined by:

i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19. State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data (as of 1/13/22)

- Total tests reported: 742,767,508
- Positive tests reported: 63,283,614
- Percent of positive tests (7-day): 28.6%

US COVID-19 7-Day Case Rate per 100,000, by State/Territory

CORONAVIRUS DISEASE 2019 (COVID-19) SITUATIONAL REPORT #389 JANUARY 14, 2022

COVID-19 HOSPITALIZATION BY RACE/ETHNICITY, CALIFORNIA

For the week ending on January 8, 2022, the graph to the right shows that the hospitalization rate among AIAN statewide was 8.3 per 100,000 (vs. 10.6 per 100,000 among Whites).

COVID-19 CASES BY INDIAN HEALTH SERVICES AREA

	NEGATIVE CASES	POSITIVE CASES	TESTED
ALASKA	775,038	31,445	923,096
ALBUQUERQUE	100,125	11,102	130,634

*as of 1/12/2022

CALIFORNIA

As of January 13, 2022, there were a total of 6,416,171 positive cases and 76,940 deaths in California.

Confirmed positive cases by gender:

- Female: 3,272,247
- Male: 3,015,600
- Unknown: 128,323

Confirmed positive cases by age:

- Age 0-17: 1,090,749
- Age 18-49: 3,657,217
- Age 50-64: 1,090,749
- Age 65 and older: 577,455

COVID-19 VARIANTS OF CONCERN, CALIFORNIA

As of January 5, 349,078 samples have been sequenced in California. In December 2021, 5% of cases in California have been sequenced so far. In November 2021, 24% and October 2021, 20% of cases in California were sequenced. The table below shows the percent of specimens sequenced that are variants of concern or variants of interest statewide.

Week Ending	Alpha	Beta	Gamma	Delta	Epsilon	Lambda	Mu	Omicron
1/5/22	2.2%	0.0%	0.0%	6.5%	0.0%	0.0%	0.0%	91.3%

INDIAN HEALTH SERVICE CALIFORNIA AREA

145,637 Tribal or Urban Indian Health Program patients in the California Area have been tested for COVID-19 as of 1/12/2022.

Of these, 14,396 patients have tested positive for COVID-19 and 124,802 have tested negative for COVID-19. The 7-day rolling average positivity rate is 22.3%.

CONFIRMED CASES AND DEATHS BY COUNTY, CALIFORNIA

Counties with most reported cases

Los Angeles	2,047,927
San Diego	559,385

Fully Vaccinated by Race/Ethnicity, California

The graph to the right shows that as of January 14, 2022, 54.2% of the eligible AIAN population statewide has been fully vaccinated (vs. 64.8% among Whites)

Note: Population estimates do not include "other" or "unknown" race and ethnicity categories, therefore their percentage of state population is not available. Some race/ethnicity groups in this county may have small populations. Where the county of residence was not reported, the county where vaccinated is used. Data is not shown where there are fewer than 11 records in a group.

Vaccination Progress by Race/Ethnicity, California.

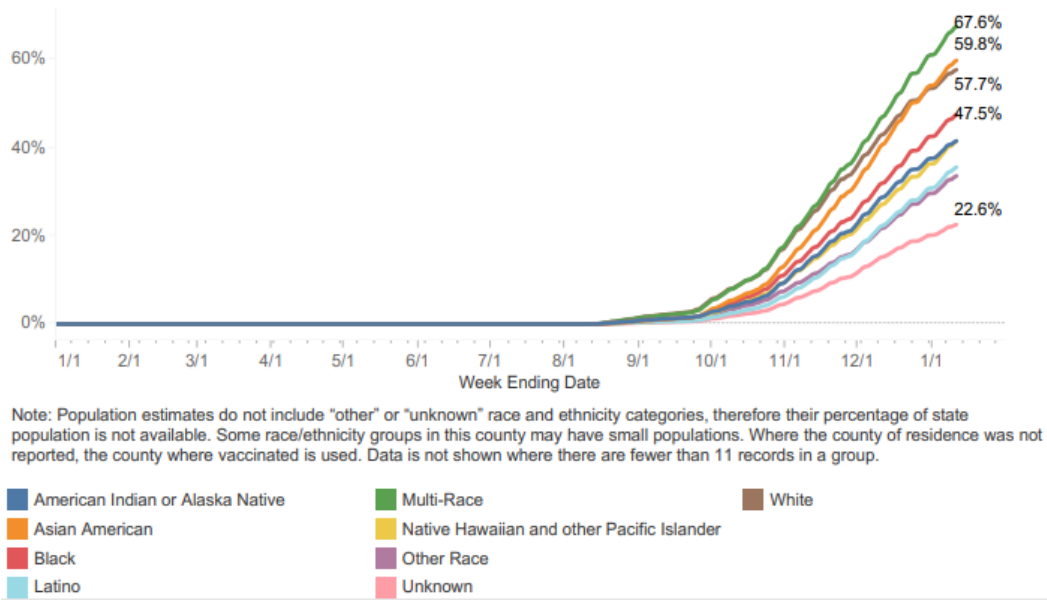

Race	Fully Vaccinated	Partially Vaccinated	Unvaccinated	Eligible Population
AIAN[^]	88,779 (54.2%)	15,494 (9.5%)	59,451 (36.3%)	163,724
Asian	4,470,337 (90.0%)	383,341 (7.7%)	114,925 (2.3%)	4,968,603
