

CORONAVIRUS DISEASE 2019 (COVID-19) SITUATIONAL REPORT #395 JANUARY 28, 2022

HIGHLIGHTS

Globally, COVID-19 cases have surpassed 364.1 million with more than 5.6 million deaths.

In the United States, the total number of cases stands at 73,512,366 and deaths at 876,632.

The Indian Health Service (IHS) Acting Deputy Director, Elizabeth Fowler sent a message urging Indian Country to order their one set of four FREE at-home COVID-19 testing kits at: [//www.covidtests.gov/](http://www.covidtests.gov/) from the US Postal Service (USPS) is now delivering. To order, you only need to provide your name and residential mailing address. No ID, credit card, or health insurance information is required. Orders will usually ship in 7-12 days. If you have difficulty accessing the internet or need additional support placing an order, you can call 1-800-232-0233 (TTY: 1-888-720-7489) to get help in English, Spanish, and more than 150 other languages – from 8:00 am to midnight ET, seven days a week. The website also provides important information about the at-home test, other valuable testing resources, and the latest Centers for Disease Control and Prevention (CDC) guidance for isolation and self-testing. There is also a Frequently Asked Questions section to answer many of the common questions regarding the at-home test kits, including any issues related to residential addresses with multiple units or multi-family living arrangements.

UNITED STATES

COVID-19: U.S. at a Glance*

- Total cases: 73,512,366
- Total deaths: 876,632
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

A probable case or death is defined by:

- i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data

- Total tests reported: 776,221,175
- Positive tests reported: 71,938,702
- Percent of positive tests (7-day): 23.4%
