

CORONAVIRUS DISEASE 2019 (COVID-19) SITUATIONAL REPORT #428 APRIL 22, 2022

HIGHLIGHTS

Globally, COVID-19 cases have surpassed 505.8 million with more than 6.2 million deaths.

In the United States, as of April 21, the total number of cases stands at 80,648,481 and deaths at 987,601.

The CDC now recommends a second booster shot for people over 50, those who are immune-compromised, and those who got the Johnson & Johnson vaccine. It must be at least 4 months since you got your first booster. See if you're eligible [HERE](#).

During the period of Dec 19, 2021–Feb 28, 2022, COVID-19–associated hospitalization rates in children aged 5–11 years were approximately twice as high among unvaccinated as among vaccinated children. Thirty percent of hospitalized children had no underlying medical conditions, and 19% were admitted to an ICU. View the full report [HERE](#).

UNITED STATES

COVID-19: U.S. at a Glance* (as of 4/21/22)

- Total cases: 80,648,481
- Total deaths: 987,601
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

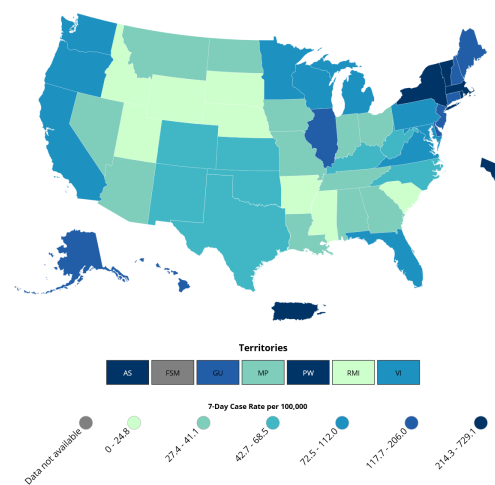

A probable case or death is defined by:

i) meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or ii) meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or iii) meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19. State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data (as of 4/21/22)

- Total tests reported: 863,838,312
- Positive tests reported: 79,054,321
- Percent of positive tests (7-day): 5.3%

Fully Vaccinated by Race/Ethnicity, California

The graph to the right shows that as of April 22, 2022, 57.2% of the eligible AIAN population statewide has been fully vaccinated (vs. 67.1% among Whites)

Note: Population estimates do not include "other" or "unknown" race and ethnicity categories, therefore their percentage of state population is not available. Some race/ethnicity groups in this county may have small populations. Where the county of residence was not reported, the county where vaccinated is used. Data is not shown where there are fewer than 11 records in a group.
