

HIGHLIGHTS

Globally, COVID-19 cases have surpassed 515.7 million with more than 6.3 million deaths.

In the United States, as of May 10, the total number of cases stands at 81,021,753 and deaths at 990,260.

The CDC now recommends a second booster shot for people over 50, those who are immune-compromised, and those who got the Johnson & Johnson vaccine. It must be at least 4 months since you got your first booster. See if you're eligible [HERE](#).

The United States Government has developed a website to easily look up COVID-19 guidance for your area based on the most current COVID-19 community levels. It also provides resources for testing, vaccines and treatment. Look up your county of residence [HERE](#) for more information.

UNITED STATES

COVID-19: U.S. at a Glance* (as of 5/10/22)

- Total cases: 81,842,060
- Total deaths: 995,371
- Jurisdictions reporting cases: 55 (50 states, District of Columbia, Guam, Puerto Rico, the Northern Mariana Islands, and the U.S. Virgin Islands)

*As of April 14, 2020, CDC case counts and death counts include both confirmed and probable cases and deaths. This change was made to reflect an interim COVID-19 position statement issued by the Council for State and Territorial Epidemiologists on April 5, 2020.

A confirmed case or death is defined by meeting confirmatory laboratory evidence for COVID-19.

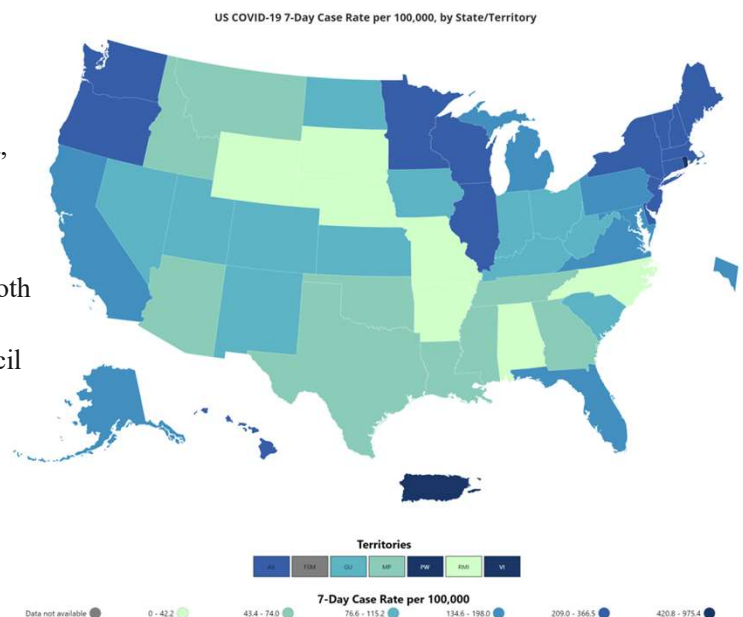

A probable case or death is defined by:

- meeting clinical criteria AND epidemiologic evidence with no confirmatory laboratory testing performed for COVID-19; or
- meeting presumptive laboratory evidence AND either clinical criteria OR epidemiologic evidence; or
- meeting vital records criteria with no confirmatory laboratory testing performed for COVID-19.

State and local public health departments are now testing and publicly reporting their cases. In the event of a discrepancy between CDC cases and cases reported by state and local public health officials, data reported by states should be considered the most up to date.

National Laboratory Testing Data (as of 5/10/22)

- Total tests reported: 877,935,969
- Positive tests reported: 80,109,650
- Percent of positive tests (7-day): 9.6%

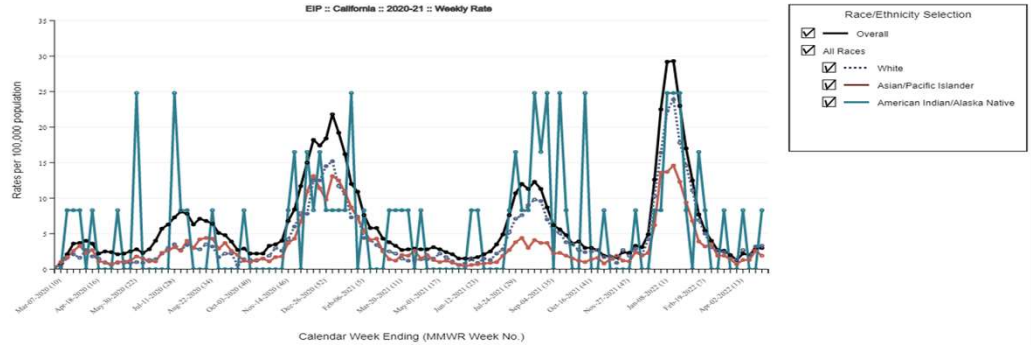

CORONAVIRUS DISEASE 2019 (COVID-19) SITUATIONAL REPORT #433 MAY 10, 2022

RATES OF COVID-19-ASSOCIATED HOSPITALIZATION BY RACE/ETHNICITY, CA.

For the week ending on 4/30/22, CDC data shows that AIAN statewide had a COVID-19 hospitalization rate of 8.3 per 100,000 population, which is lower when compared to Whites (3.3 per 100,000).

COVID-19 VARIANTS OF CONCERN, CALIFORNIA

As of May 4, 2022, there have been 560,862 samples sequenced in California. In March 2022, 17% of 77,369 cases in California had been sequenced, and this percent is expected to increase in coming weeks as more sequence data becomes available. In February 2022, 15% of 324,280 cases in California had been sequenced. The chart below shows the percent of specimens sequenced by month that are variants of concern/interest. The table below shows the percent of specimens sequenced by recent weeks that are variants of concern/interest statewide.

Week Ending	Alpha	Beta	Gamma	Delta	Epsilon	Lambda	Mu	Omicron

Fully Vaccinated by Race/Ethnicity, California

The graph to the right shows that as of May 10, 2022, 56.2% of the eligible AIAN population statewide has been fully vaccinated (vs. 68.0% among Whites)

Note: Population estimates do not include "other" or "unknown" race and ethnicity categories, therefore their percentage of state population is not available. Some race/ethnicity groups in this county may have small populations. Where the county of residence was not reported, the county where vaccinated is used. Data is not shown where there are fewer than 11 records in a group.

Vaccination Progress by Race/Ethnicity, California.

Race	Fully Vaccinated	Partially Vaccinated	Unvaccinated	Eligible Population
AIAN [^]	92,060 (56.2%)	14,359 (8.8%)	57,305 (35.0%)	163,724
